

# GIARDIA

One of the most frustrating of diseases was Giardia. Canine and feline. An article appeared in JAVA in the early 80's using Iprnidazole for the treatment of this disease. This turned out to be a God send. It worked quickly and without any major secondary problems in both species. I adjusted the treatment to fit our clinical style. It became a very easy thing to dose. Here is the mixture.

## Iprnidazole

30 gms of dry powder Iprnidazole in 1 liter of distilled water

Of this mixture 20 cc is added to 1 gallon of distilled water.

this then is free fed to cats or dogs for 1 week. MAY BE ORALLY DOSED IF ANIMALS REFUSES TO DRINK. 10 CC ORALLY TWICE DAILY

I found this to be 99 % effective in that period of time.

CAVEAT IPRONIDAZOLE WAS DISALLOWED BY THE FEDS.  
CAN STILL BE FOUND IN THE HANDS OF TURKEY GROWERS.  
HARD TO FIND NOW.

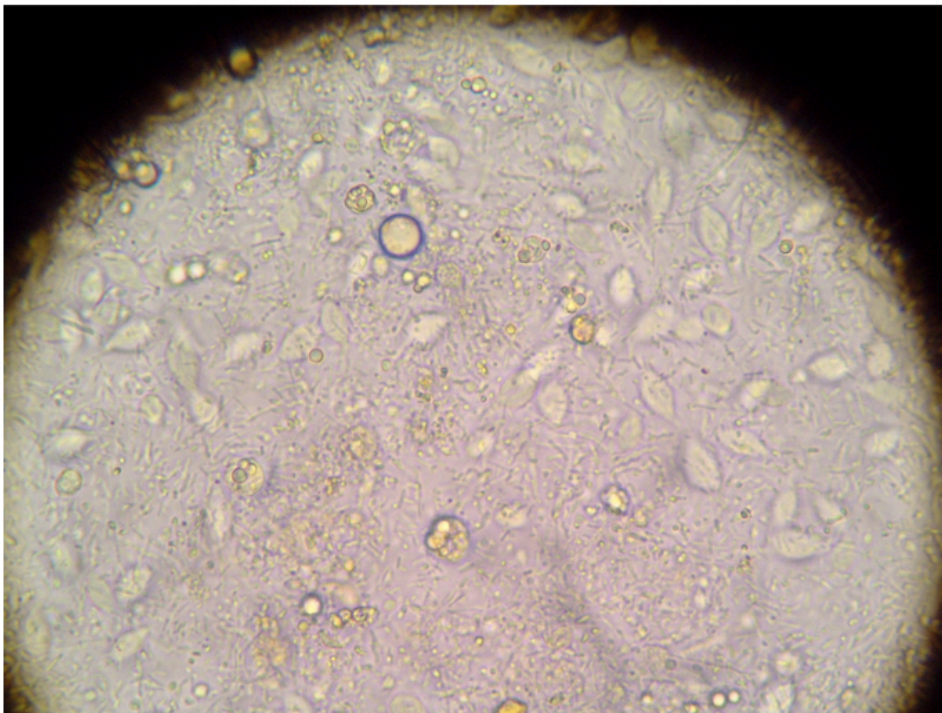

## TRICHOMONAS

THIS DISEASE POPPED UP CLINICALLY IN THE 90'S. IN A RECENTLY PURCHASED CAT FROM GEORGIA. THE NEW OWNER WAS TOLD ALL CATS HAVE DIARRHEA. ON CHECKING THE STOOL IT WAS A SWARM OF NEW ORGANISMS TO ME. TRICHOMONADS. SMALL VERY FAST SWIMMING PROTOZOA. HOW TO TREAT ? LITERATURE SAID NO TREATMENT AVAILABLE BUT IF YOU WAIT 2 YEARS THEN IMMUNE SYSTEMS KICK IN AND REDUCE THE NUMBERS AND THE LOOSE STOOL. AS LUCK WOULD HAVE IT I TRIED THE ABOVE PROTOCOL AND FOUND THAT IT CURED THIS DISEASE IN THE SAME 7 DAYS AS GIARDIA ABOVE. SO, IF YOU CAN FIND A SOURCE OF THIS DRUG USE IT. IT WORKS AND LEAVES NO SECONDARY PROBLEMS.

# TRICHOMONAS IN DOGS

THIS DISEASE APPEARED IN AN ISOLATED KENNEL OF PUPS ALSO. SAME DRUG SAME TIMING AND IT CURES THIS CONDITION IN DOGS ALSO. QUESTION WAS, THIS WAS A REALLY ISOLATED KENNEL IN THE DESERT OF CALIF. HOW DID THIS DISEASE GET INTO DOGS ? I SAW AT LEAST 4 OTHER LITERS OF DOGS WITH THIS CONDITION. NO PROBLEM SEE TREATMENT ABOVE. TREAT AND GET 1 WEEK ELIMINATION OF THE PROBLEM.

METRONIDIZOLE WHICH IS ONE OF TOUTED DRUGS ALONG WITH RONIDAZOLE WERE COMPLETE FAILURES IN MY HANDS. NOT ONLY DID THEY NOT CONTROL THE PROBLEM OF GIARDIA AND TRICHOMONAS BUT LEFT DOGS AND CATS WITH SERIOUS SECONDARY PROBLEMS. AS THE DOSAGES WERE INCREASED TO TRY CONTROL I RAN INTO LIVER INFLAMMATION. NO CLIENT LIKES A YELLOW PET.

Trichomonas in a stool sample
